Summary

Computer Science student with strong foundations in Data Structures & Algorithms, Full-Stack Development, and Generative AI. Skilled in developing MERN stack applications and integrating AI using LangChain, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG). Experienced in tech club initiatives and building automation solutions for real-world applications. Passionate about solving complex problems and creating scalable, intelligent software systems.

Education

KL University , Vijayawada 2023–2027

- B Tech (Bachelor of Technology) in Computer Science Engineering (CSE) with 9.27 CGPA.

Skills

Languages: Python,Sql
Frontend: HTML, CSS, Bootstrap, React.js
Backend: Node.js, Express.js
Databases: MongoDB, SQLite
AI Technologies: LangChain, Large Language Models(LLMs), Prompt Engineering, Generative AI, Automation Systems
Tools & Other: Git, GitHub, Linux, Docker, CI/CD, Postman, REST APIs, Agile, Leadership

Competitive Programming

- Solved 180+ DSA problems on LeetCode covering arrays, strings, linked lists, stacks, queues, trees, hashing.
- Achieved **2-star rating on CodeChef**, demonstrating strong competitive programming skills.

Experience

Full Stack Developer, KL GLUG – Collaborated with academic and administrative teams Sep 2025 – Nov 2026 to support university operations

- Developed a multilingual conversational AI chatbot as a Full-Stack Developer using MERN stack and LLM-based architecture.

Projects

HireMatch – AI-Powered Resume Analyzer github

- Architected an AI-driven interview intelligence platform using Google Gemini (1.5 Flash), delivering personalized match scoring and dynamic technical/behavioral question generation from resumes and job descriptions.
- Built a scalable MERN stack application with JWT-based authentication, protected routing, React Context API, and MongoDB for secure user and data management.
- Developed a Zod-validated LLM processing layer to transform unstructured AI responses into structured JSON, enabling automated skill-gap analysis and personalized 7-day preparation roadmaps.

Checklist Automation Agent github

- Built an AI-powered checklist automation agent using LangChain and Gemini Flash.
- Implemented rule-based validation pipelines to automate month-end close workflows.
- Integrated LLM-driven document generation to produce structured reports from checklist inputs.

SplitLedger – Real-Time Personal & Group Expense Tracker github

- Built a full-stack expense management application using React, Node.js, Express, and SQLite with an interactive dashboard powered by Recharts for daily, monthly, and yearly expense tracking.
- Implemented real-time bill splitting using native WebSockets, enabling instant synchronization of shared expenses and debt settlements among connected users.
- Designed RESTful APIs for complete CRUD operations and developed a responsive interface using React Router DOM, Vite, and Lucide React for seamless user experience.

Certifications

AWS Certified Cloud Practitioner | Cambridge Linguaskills B2 Certification
